

Our department's activities and related -diseases (2023/10)

~ For patients and their families ~

We have devoted ourselves to treating urolithiasis and benign prostatic hypertrophy for decades. We actively offer patients with stone diseases and enlarged prostate to be treated by endoscopic maneuvers.

Contact us through the regional medical cooperation system if interested in our treatments.

Subsequently, you are welcome to be accompanied by a letter of introduction written by your doctors.

The medical services that we can offer to patients abroad are indicated below,

- We have many years of experience in having patients from abroad. Some doctors and medical staff are ready to support these services.
- According to our department's regulations, we will charge the medical fees determined by our department for the above treatments. You are welcome to ask our staff for details.
